

# Project Management For IT Professionals

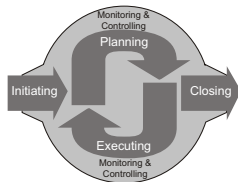

How to Plan, Execute and Control  
Complex Technology Projects

Everything in IT is a project, and project failure in IT is one of the most expensive problems facing many organizations today. IT professionals have learned the hard way that they need proven project management tools and strategies to deliver on the complex, and often high-dollar and high-stakes, involved in technology and systems projects.

**Research suggests that as many as 70% of IT projects fail to achieve their intended objectives and virtually all run over time or over budget in some way.** As an IT professional, you need to be more successful in delivering on your project expectations.

**Project Management for IT Professionals** is a comprehensive two-day course based on the Project Management Institute's internationally recognized manual for best practices.

Designed for IT professionals, this training delivers proven tools and techniques that can take you to unprecedented levels of project success. In this two day intensive program, you'll be immersed in mission critical skills for effectively planning, executing and controlling every phase of the project life cycle.

In the **Project Management for IT Professionals** program, you will learn...

- ✓ The five stages of a successful project
- ✓ How to get your project on target right from the beginning
- ✓ How to develop a clear understanding of the expectations of your organization and customers
- ✓ The four critical documents that exist in all successful projects.
- ✓ Techniques to build more effective estimates of resource and time for your IT project
- ✓ Three ways to uncover and prevent the hidden risks of IT project failures
- ✓ The single most powerful tool to kill scope creep
- ✓ How to implement tracking systems and reporting mechanisms that keep everyone informed and on board

Packed with solutions specific to the challenges of IT projects, this intensive program is a must-attend event for you if you want to improve the outcome of every IT project you manage from now on.

## Who Should Attend

- ✓ IT project managers
- ✓ IT team leaders
- ✓ IS managers
- ✓ IT administrators
- ✓ IT developers
- ✓ Systems analysts
- ✓ IS strategists
